

Your timetable. Your teaching journey.

Set up the app, prepare for sessions, manage homework and build your PGCE record - on your phone and computer.

43 walkthroughs | 86 mobile and desktop screenshots

Current app: 24 September 2026
Synthetic example data. Actual app captures.
Self-contained PDF edition.

How to use this guide

Each walkthrough pairs desktop and mobile screens with practical steps. Zoom in to read the original captures.

01 · Set up your timetable	3
02 · Get through the day	7
03 · Homework and personal tasks	11
04 · Set up and revisit every school	15
05 · Get there and get home	19
06 · Build your PGCE record	22
07 · Evidence, reviews and documents	27
08 · Academic work and realistic planning	31
09 · Tailor the app	37
10 · Keep your data recoverable	42

More useful tools: pages 46-49 | Common questions: pages 50-51

About these screenshots

Captured from a local copy of Pass 89 (revision 9e0b49c). Example dates use the week of 16 September. External services were blocked: saved-row notices and map fallbacks are capture conditions. Live routing, sync and authenticated mentor sharing were not demonstrated.

Connect the right sheet tab

First launch → Connect timetable

Open the Google Sheet on the timetable tab you want, then copy its full link.

1. Paste the link and choose Connect timetable. The app checks whether it can read recognised timetable rows.
2. The sheet must be accessible to the app; the setup screen asks for “anyone with the link can view”. Only do this for a timetable intended to be shared.
3. To explore without connecting a sheet, choose Or try it with demo data.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Notifications and location are optional. You do not need to grant them to finish setup.

Choose your name, groups and specialisms

Connect → Personalise

Personalise decides which course sessions belong to you.

1. Give the timetable a recognisable name, such as My PGCE timetable.
2. Choose your group and specialisms where they are offered. Read the on-screen explanation before leaving a choice empty.
3. Choose Preview timetable. You can go Back without losing these choices.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

You can revisit sources, groups, specialisms and course setup in Settings → My timetable.

Check before saving

Personalise → Preview timetable

The preview is your chance to check the source and membership before the profile is created.

1. Check the name, selected groups and sample sessions.
2. Review any unrecognised or invalid rows; repair the source sheet if necessary.
3. Choose Save this timetable when the preview looks right.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

The screenshot is a synthetic example sheet, not your real course data.

Complete the useful extras

After saving → Today

Your timetable is ready to use. Finish optional setup when it is useful to you.

1. Open Settings to add the key-dates source, travel preferences or reminders.
2. Open PGCE file → All placements to record each school. A placement review may also be offered after the specialism-selection flow.
3. Try opening a session, then revisit Settings to make a backup once you have added personal records.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Future schools can remain incomplete. You can return to their setup later.

Start with Today

Main navigation → Today

See the next relevant session, nearby deadlines and useful next actions.

1. Read the session time and place, then open it for the full detail.
2. Use the preparation link when a session has checklist items or homework due.
3. Open the header sync control if it is present to check its state; settings remain available beside the page heading.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

The saved-timetable notice in these screenshots is expected: live network requests were blocked during capture.

Explore your week on phone and desktop

Main navigation → Schedule

The phone layout uses a day strip and a focused daily list. The desktop layout uses the extra space to show more context.

1. Use the previous/next controls and Today to move around the calendar.
2. Switch Week, Month or List to suit the question you are answering. Use Filters to narrow what is visible.
3. Open a session card or a highlighted deadline. Use the add action for a personal commitment and the planning action for study time.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

A temporary display filter changes what you see. Your group/specialism membership is managed in Settings.

Understand the session detail

Schedule or Today → open a session

A session brings attendance, preparation, homework, notes and travel together.

1. Use Overview, Homework, Notes and Travel & map to find the relevant part of the session.
2. Record attendance for an attended teaching session; deadlines and homework use completion instead.
3. Add preparation items and a follow-up note when useful. Marking yourself ready is your own statement, not a score.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

If an imported row is actually a deadline, the app supports treating it as a deadline rather than taking attendance.

Find something across your records

Find / search action

Find helps you return to a session, task or record without remembering which screen it was on.

1. Enter a distinctive title, subject or phrase.
2. Read the result type and date before opening it.
3. Use Back to return to the previous context.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

If a linked source disappears from the timetable, check its unresolved or changed state rather than assuming the record has been deleted.

Separate work due here from work set here

Session → Homework

The Homework view distinguishes incoming work from homework you record during this session.

1. Check Due in this session before class.
2. Open an existing item to read its instructions, edit it or change its due target.
3. Use Add homework under the work set in this session.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

These are your coursework and preparation records. This is not a pupil homework distribution system.

Add homework and choose its due session

Session → Homework → Add homework

Link the work to a later occurrence such as Maths 2, or use a fixed date.

1. Enter a clear title and any instructions.
2. Choose the suggested later session, search the other eligible sessions, or select a date instead.
3. Review the source and due choice, then save. The homework becomes available on Tasks and the relevant due session.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Session-linked and fixed-date homework are different choices. A moved linked session can produce a change for you to review.

Edit, plan and complete the same item

Tasks or session → open homework

The homework page is the place to manage instructions, status, due links, resources and study effort.

1. Use Edit or the due-change action to correct the existing homework; do not create another copy just to change a date.
2. Add an effort estimate or subtasks, then use Review study times to inspect proposed slots. Add a wallet resource or web link when needed.
3. Mark the homework done when the work is complete. Finishing a study block records work done in that block; it does not automatically complete the homework.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

If Tasks shows Needs review because a due session moved, choose Follow this session or Keep the original date after checking the impact.

Keep deadlines, homework and actions together

Main navigation → Tasks

Tasks groups work by when it needs attention and keeps completed work accessible.

1. Use the type/source and due date to distinguish homework, your tasks and imported key dates.
2. Choose To do, In progress or Done. Open a card for the corresponding editor or detail.
3. Use Add task for an independent personal deadline. Revisit Completed to inspect or reopen finished work.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

The homework record owns its status. Completing it in one view is reflected in the other views.

Keep all three placements in view

PGCE file → All placements

Each placement can be opened or edited whether it is current, upcoming or incomplete.

1. Choose Set up for a placement you have not recorded yet.
2. For a saved placement, use Open to work with its records or Edit to change its details.
3. Review the block links so the right school is attached to the right timetable days.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Readiness and timing are separate: an upcoming placement can be fully set up, and a current placement can still need a location pin.

Edit the school and confirm its location

Placement → Edit school

School name, address, map pin and entrance instructions describe the school used for travel.

1. Enter the address with enough detail to identify the school. Locate it and visually check the candidate pin before confirming.

2. After changing the address, confirm the new location. The old confirmation must not stand for a different address.

3. Review the changes and save. Use the appropriate edit section for mentor/dates, school-day pattern or timetable links.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

The capture shows an unavailable map because external map requests were blocked. It is a real error state, not the expected online map appearance.

Use your placement workspace

All placements → Open a school

The school page combines practical details, travel and records belonging to that placement.

1. Check school dates, mentor contact and the normal day before travelling.

2. Open the next school day, lesson or relevant record. Review planned school days separately from days you logged.

3. Use School resources to keep useful documents or links at hand. Edit the placement whenever details change.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

A logged day is not automatically a provider-confirmed outcome. Keep the app's different experience layers distinct.

Prepare for the next placement

PGCE file → Prepare for the upcoming placement

A transition checklist keeps the new school’s practical setup and the work you want to carry forward together.

1. Review School & travel, Teaching context, Mentor & access and the carry-forward items presented.
2. Mark what you have checked. If something is not known yet, defer it with a follow-up date.
3. Revisit stale checks when school details change. Keep historical evidence attached to the placement where it happened.

DESKTOP / 1440 x 1000

School named and its map pin confirmed

A checklist does not automatically share evidence, award QTS or alter mentor access.

MY TIMETABLE / VISUAL USER GUIDE

18

Set your travel preferences

Settings → Travel & home

Travel depends on a meaningful origin, confirmed destination and selected mode.

1. Choose the travel mode and whether you want to use device location.
2. Add your home address and confirm the location offered by the app.
3. Review arrival buffers and saved origin choices before relying on a departure suggestion.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

You can use saved locations without continuous device-location permission. Live transport and geocoding need a connection.

Plan the journey to school

Placement → To school

Check the named school, origin and arrival requirement before opening directions.

1. Make sure the selected origin is the place you will actually start from.
2. Read the route or distance-estimate label and any checked time. A live itinerary and a fallback estimate are different.
3. Use the map, route steps, copy-address or external directions actions that are available.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

No live TfL data or map tiles were fetched for this guide. The screenshot demonstrates the offline/fallback state; it is not a journey recommendation.

Plan your return independently

Placement → Back home

The return view starts from the chosen school or selected origin and heads toward your saved destination.

1. Check the origin and destination labels; viewing a school does not mean your device is physically there.
2. Choose the available route and inspect its departure/arrival context.
3. Open external navigation when ready, or copy the address if the route provider is unavailable.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Do not assume the morning itinerary simply runs in reverse. The return is a separate request.

Navigate the PGCE file

Main navigation → PGCE file

Use the placement controls and the four learning areas as your main entry points.

1. Open Lessons & practice for lesson planning and teaching cycles.
2. Open Mentor & feedback for meeting preparation, observations and agreed targets.
3. Use Evidence & reviews for your portfolio, and Academic work & programme for assignments, knowledge and course requirements.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

The app helps organise learning. It does not determine whether you meet QTS or issue a qualification.

Find or add a lesson record

PGCE file → Lessons & practice

A lesson record is your planning/evaluation work, which can be linked to a timetable occurrence and placement.

1. Open a recent lesson or choose New lesson.
2. Select the appropriate school/placement and occurrence when relevant.
3. Use a practice focus or teaching cycle to connect feedback to the next attempt, rather than copying the same record.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

A timetable session and a lesson plan are related records, not interchangeable identities.

Plan, rehearse, teach and review

Lessons & practice → open a lesson

The workbench gives the lesson a practical sequence rather than one large undifferentiated note.

1. Plan the intention, prior knowledge, likely misconceptions and sequence.
2. Use the Rehearse and Teach stages as appropriate; the Teach area can also record homework.
3. After teaching, review what happened and choose the next action. Link observations or a teaching cycle when useful.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Only record what you know. A blank evaluation is not a failure, and a linked observation is not an automatic grade.

Keep mentoring work connected

PGCE file → Mentor & feedback

Prepare for conversations, record observations and track agreed actions.

1. Open Mentor preparation before the meeting.
2. Use Mentor meetings, Observations and Targets for the corresponding record types.
3. Check open actions and link the relevant placement. Use Mentor access only when you intend to share through the portal.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Learner-entered notes and reviewer-authenticated feedback have different provenance. Keep that distinction visible.

Prepare a useful mentor conversation

Mentor & feedback → Mentor preparation

Bring your focus, examples, questions and proposed next steps together before the meeting.

1. Choose the focus and the relevant examples or records.
2. Write what changed, where you need help and the next steps you want to discuss.
3. After the meeting, record the outcome and follow-up actions in the appropriate records.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Preparation stays private until you explicitly include material in an export or share.

Collect and curate evidence

PGCE file → Evidence & reviews

The journal, reflections, evidence examples and review packs serve different jobs.

1. Keep session notes/photos and weekly reflections as the original record of your learning.
2. Use Evidence examples to explain the situation, your decision, what you noticed and what you changed next.
3. Use Review packs for a selected, reviewable set of material to discuss or export.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Curriculum development, Teachers' Standards and professional conduct are not a single combined progress score.

Reflect on the week

Evidence & reviews → Weekly reflections

Record what went well, the challenges and one useful focus for the following week.

1. Choose the correct week and write concrete examples.
2. Link applicable standards where helpful without treating every box as a requirement to fill.
3. Return later to edit the record or draw on it in an evidence example.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Use anonymised classroom context. The personal reflection is yours, not a provider assessment.

Prepare a review pack

Evidence & reviews → Review packs

A pack pins selected records so the version you review remains understandable if the source is later edited.

1. Create or open a pack; search/filter and select the records you want to pin.
2. Check the preview, captions and attachment availability. Source changes can be shown separately from the pinned copy.
3. Export the reviewed text or continue to the recipient/share review if mentor access is configured.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Sharing is a separate action from saving a private draft. Check recipients, files and the exact version before sending.

Keep documents close to the work

PGCE file → Documents & records → Open wallet

The wallet stores documents on this device and lets other records refer to them.

1. Add a useful file and give it a recognisable name.
2. Link a wallet document to homework, school resources or other supported records without uploading another copy each time.
3. Use a file-inclusive backup to move the bytes to another device; use the data centre to inspect missing resources.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Routine record sync does not carry photo/document bytes. A missing file reference is not the same as a recovered file.

Use the academic workspace

PGCE file → Academic work & programme

This area brings assignments, subject knowledge, programme requirements and workload together.

1. Open Academic work for assignment projects.
2. Use Subject knowledge for a focused learning goal or resource.
3. Open Programme to record the course context and review requirements from your provider.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Provider-specific requirements must be checked against your actual course. The app does not assume a universal day target or assessment rule.

Work through an assignment

Academic work & programme → Academic work

The assignment workflow can hold the brief, reading, outline, draft references, submission evidence and feedback.

1. Create a project and link its deadline where available.
2. Build the outline and source list, and link draft documents by their wallet identity.
3. Record submission and any receipt; add feedback and the next action when it arrives.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

A learner-recorded submission is not confirmation from a university system. External links and local files remain distinct.

Develop subject knowledge

Academic work & programme → Subject knowledge

Turn a gap or question into a goal with resources and a planned classroom application.

1. Write the topic and the question you want to answer.
2. Link resources and, where appropriate, a lesson in which you will apply the learning.
3. Review your confidence and next step over time.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Your confidence rating is a personal reflection, not a competency grade.

Record your programme and requirements

Academic work & programme → Programme

Keep academic milestones and professional training requirements visible with their sources.

1. Enter the course/route context and provider information requested.
2. Import or record requirements using the app's supported format, then review and confirm them.
3. Add milestones and review dates so they can inform planning.

DESKTOP / 1440 x 1000

The desktop screenshot shows the 'Programme' form in a modal window. The form is titled 'Programme' and has a close button (X). It contains several sections: 'Course' with 'Packs (0)', 'Requirements (0)', and 'Milestones (0)'; 'Route' with a dropdown menu set to 'PGCE with QTS'; 'Phase' with a dropdown set to 'Primary' and 'Mode' with a dropdown set to 'Full-time'; 'Provider' with a text input field; 'Academic year' with a text input set to '2026/27' and 'Jurisdiction' with a dropdown set to 'England'; 'Subject (optional)' with a text input field and 'Age range (optional)' with a dropdown set to '5-11'; 'Course starts' with a date picker set to 'dd/mm/yyyy' and 'Course ends' with a date picker set to 'dd/mm/yyyy'. A 'Save course profile' button is at the bottom.

MOBILE / 390 x 844

The mobile screenshot shows the 'Programme' form in a modal window. The form is titled 'Programme' and has a close button (X). It contains several sections: 'Course' with 'Packs (0)', 'Requirements (0)', and 'Milestones (0)'; 'Route' with a dropdown menu set to 'PGCE with QTS'; 'Phase' with a dropdown set to 'Primary' and 'Mode' with a dropdown set to 'Full-time'; 'Provider' with a text input field; 'Academic year' with a text input set to '2026/27' and 'Jurisdiction' with a dropdown set to 'England'; 'Subject (optional)' with a text input field and 'Age range (optional)' with a dropdown set to '5-11'; 'Course starts' with a date picker set to 'dd/mm/yyyy' and 'Course ends' with a date picker set to 'dd/mm/yyyy'. A 'Save course profile' button is at the bottom.

Do not mark an imported requirement confirmed unless you have checked it against your provider's information.

Make room for the work

Academic work & programme → Workload & support

The planner compares estimated work with available time, respecting commitments and protected windows.

1. Add realistic effort estimates to tasks/homework that need study time.
2. Inspect proposed blocks and unallocated work, then accept the changes you want.
3. Use Protected time and Support for recurring boundaries, contacts and private questions.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Missing effort remains unknown. Planning a block does not mean the underlying task or homework is complete.

Review this week and plan the next

Workload & support → Weekly review

See what was planned/logged, what remains and how next week's fixed commitments affect your space.

1. Write a short weekly reflection.
2. Review the added/moved/untouched blocks in the proposed changes.
3. Accept deliberately and use the available batch undo if you need to reverse that acceptance.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

A timetable change may make a previous proposal stale. Review again before accepting.

Find the right category

Page header → Settings

Use My timetable, Reminders, Travel & home, Connected calendars, Data & devices, Appearance and Help & privacy.

1. Choose the category closest to your task, or use Settings search.
2. Read local save/status messages when changing preferences.
3. Use Back to return to your previous screen.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Some preferences are device-specific. Verify important reminder/location choices separately on your phone and laptop.

Manage sources and membership

Settings → My timetable

Manage timetable profiles, sheet sources, key dates, notices, groups, specialisms and course setup.

1. Check the timetable profile before editing its source.
2. Connect the key-dates source for imported deadlines and notices where your course provides them.
3. Review membership options such as student-rep participation if relevant, rather than hiding unwanted sessions one at a time.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Student-rep meetings are optional and should not inflate attendance. Use the dedicated setting when it applies.

Choose useful reminders

Settings → Reminders

Session reminders, key-date reminders, attendance prompts, quiet hours and leave alerts are separate controls.

1. Check notification permission/status before choosing reminder offsets.
2. Select the types of alerts you want and set quiet hours.
3. Configure background push only if you want it; follow the app's permission/install guidance for your platform.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Delivery depends on the device, permissions and connectivity. Calendar reminders are a separate route when browser notifications are unavailable.

Use your timetable in another calendar

Settings → Connected calendars

A calendar feed and a downloaded calendar file solve different problems.

1. Use the feed subscription when you want another calendar app to refresh the timetable periodically.
2. Use an ICS export for a file you import or keep.
3. Check the receiving calendar's refresh and reminder preferences.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

A file export is a snapshot. A subscribed calendar refreshes on the receiving service's schedule, not instantly.

Make it comfortable to read

Settings → Appearance

Choose the available theme and reading density for this device.

1. Compare the theme options in the place you normally study.
2. Use comfortable spacing if compact lists feel too dense.
3. Use browser/device text scaling when needed and keep important controls visible.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

Phone and desktop have different layouts. The guide's view controls let you compare the same screen on both.

Understand the data & sharing centre

Settings → Data & devices

The centre summarises confirmed local, sync, backup and sharing states.

1. Read each status card and its last confirmed result.
2. Open Review details to inspect file availability, backup inclusion and shared-pack expiry.
3. Relink a missing file when you have the original, or download the recovery guide for a plain-language account of your data.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

A generated backup is only safe once you have actually kept the downloaded file. The app cannot verify your external storage.

Create a backup you can restore

Data & devices → Back up... (preview first)

Preview scope and records before generating the backup file.

1. Choose everything on the device or the intended timetable only; inspect what the preview includes.
2. If using passphrase encryption, keep that passphrase securely: it cannot be recovered by the app and is not your sync code.
3. Generate the file, confirm it exists where you saved it, and later use Restore from backup to review the impact before applying.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

You can store a downloaded backup in your own cloud folder. This guide does not claim automatic Google Drive/iCloud backup or background cloud verification.

Manage who can receive your review packs

Data & devices → Mentor access

Mentor access is an explicit sharing channel, separate from syncing your own devices.

1. Turn on access when you intend to invite someone, then create the invitation and send it privately yourself.
2. Review who has joined; share a selected pack only with intended recipients.
3. Use the access/sharing controls to manage permissions, and Check for feedback to collect new responses.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

An invitation is sensitive. No invitation, owner credential or real mentor account was created for these screenshots.

What a mentor opens

Mentor invitation → separate mentor portal

A mentor uses the invitation or sign-in link you provide, rather than your learner sync code.

1. The invitation flow asks the mentor to choose the credentials required by the portal.
2. After signing in, the mentor can view the packs explicitly shared with them and leave feedback.
3. You collect the feedback in the learner app, where its provenance is preserved.

DESKTOP / 1440 x 1000

MOBILE / 390 x 844

This screenshot is the portal's unauthenticated entry state. It does not show an authenticated mentor or live shared records.

More useful tools

These tools extend the core workflows shown in the screenshot pages.

Connect your own devices

Settings → Data & devices → Sync between devices

On your first device, choose Turn on sync (creates a code), then Copy code. On your other device, enter that code and choose Connect to that device. Check the status and last successful time. Use Sync now when you want to check immediately. Keep the code private and rotate it if exposed. Photos/documents still need a file-inclusive backup.

Review attendance

Settings → Data & devices → Attendance analysis → Term stats

Record attendance on each teaching session, then use Term stats for the summary, subject breakdown and CSV export. Unrecorded sessions are separate from absence. Placement school days and taught hours are different measures; check the per-school record before interpreting a total.

More useful tools

These tools extend the core workflows shown in the screenshot pages.

Find a common study time

[Settings](#) → [My timetable](#) → [Study group](#)

Enter your display name. Join with a coursemate's group code, or Create a group and share its code yourself. The group compares free times rather than sharing session details. Read member freshness before relying on availability. A study-group code is different from the private code used to sync your own devices.

Connect a teaching cycle

[PGCE file](#) → [Lessons & practice](#) → [Teaching cycles](#)

Open a cycle to move between its plan, taught lesson, selected observations and next attempt. Link the original records; an observation can inform more than one cycle. Read missing/deleted-source states rather than treating every linked stage as completed.

More useful tools

These tools extend the core workflows shown in the screenshot pages.

Record school experience

PGCE file → **Documents & records** → **Experience ledger**

Choose the placement, date, activity type and record layer. Enter the duration you actually know and link a source where available. Planned, learner-logged, discussed/reviewed and referenced provider outcomes remain separate; a provider outcome needs its source. Compare against a requirement only after confirming it.

Return to notes and photos

Session → **Notes**; **PGCE file** → **Evidence & reviews** → **Evidence journal**

Keep notes attached to their original session. Use the evidence journal to return to that learning and curate examples for review packs. Photos stay on their original device unless moved in a backup that includes files. Check attachment availability before exporting or sharing.

More useful tools

These tools extend the core workflows shown in the screenshot pages.

Share reusable course setup

[Settings](#) → [My timetable](#) → [course setup](#)

Review the course settings, timetable sources and placement policy before exporting a reusable course template. The template is for public course configuration, not your private records or sync credentials. On import, review what will be used before applying it.

Find help and recent changes

[Settings](#) → [Help & privacy](#)

Use the help/privacy area for the app's guidance and What's new history. When reporting a problem, include the screen, device/browser and steps that caused it; avoid including private sync codes, mentor invitations or personal documents.

Common questions

How do I install it on my phone or computer?

Open the app in your browser. If an install option is available, use it. On iPhone/iPad, Safari's Share menu normally provides Add to Home Screen; on compatible desktop browsers, look for the install action in the address bar or browser menu. Names and availability vary by browser. You can also use the app directly in a tab. Notification support is checked separately inside Reminders.

What if I do not know my next placement school yet?

Keep the future placement incomplete. Open All placements to revisit its own school, dates, timetable, contacts and travel details. Use the transition checklist to record what you still need to find out. Do not copy the previous school just to fill every field.

Why does homework appear in more than one place?

The app links the homework record to its source and due context. The session, homework detail and planning views can show the same work. Open the existing record to edit it rather than creating a second task for the same homework.

What if the timetable or a homework deadline changes?

Review changed-session and unresolved-link notices. Choose whether the work should follow the linked session or keep its date where the app offers that decision. Check the effective due date afterwards. Your personal work should not be assumed deleted because an imported session disappeared.

Common questions

Can I use it when I have no connection?

The app can show saved timetable data and local records. Live timetable refresh, map tiles, route information, sync and mentor sharing require connectivity. Read saved-data or unavailable-service notices before relying on a journey time. Offline availability also depends on whether the app and its data have previously loaded on the device.

What is the difference between sync, backup and sharing?

Sync connects your own devices; a backup is a file you keep and can later restore; mentor sharing publishes selected review-pack content to chosen people. None is a substitute for all the others. Sync does not transfer the bytes of your attached photos/documents. Keep the original files and inspect missing-file notices on other devices.

Why are maps and some status messages incomplete in this guide?

All examples were captured locally with invented records and external services blocked. The saved-rows banner and map/service fallback states show how the app looks when a service is unavailable. These captures do not demonstrate live traffic, production sync, real invitations or a real school's details.

Which settings belong to one timetable and which belong to the device?

The source, group and specialism controls live in My timetable. Reading preferences, notification permissions and some local data controls are device/browser concerns. When switching profile or device, read the labels in Settings and verify the current timetable before editing or restoring data.
